WE ARE USING LATEST TECHNOLOGIES

OUR SERVICES

❖ WEB DEVELOPMENT

“Enriching the look and feel of your website, as per your need thus making it outstanding, beautiful, easy to use and eye-catching”

WEB DEVELOPMENT is that build fast and scalable web systems that reduce hassles and increase profits. We provide our clients with development: web design, custom web development outsourcing, offshore programming, interactive web sites, and database-driven websites development outsource services.

Our website designs are user friendly, download quickly, and are developed to provide a maximum return on investment. For code we use Latest versions of HTML & CSS. This helps your website on many levels – it loads faster, it’s understood by search engine spiders, works in all browsers, and is very easy to alter. Our sites are programmed using PHP depending on the requirements of the project.

A good design on website can drag maximum flow of web traffic to your website. More traffic means more business and more business means more potential for growth and earning. In ENFFIE web designing is the most important step for an enterprise today if it wants to increase its profitability and accountability.

Wi-Fi HOTSPOT MANAGEMENT

Our Wi-Fi Hotspot Management Solution is powerful yet flexible for improving browsing experience, performance, security, usability and manageability thereby overcoming most of the issues caused by open wireless networks

A Hotspot is a site that offers Internet access over a wireless local area network through the use of a router connected to a link to an Internet service provider. Hotspots typically use Wi-Fi technology. The hotel and hospitality industry can be said to be all about satisfying customer service needs on a regular and consistent basis. The internet has become most people and traveler' major communication medium - taking over for telephone, fax or even their mobile cell phones.

Our Hotspot solution is ideal for Hotel, Motel, Cafe, Restaurant, Airport, Conference Rooms and other sites that commonly host business travelers. It is all about giving you unprecedented control on your own hotspot. It helps in building a secure and user-friendly Internet access experience to customers and provides an easy web based interface for administrators to manage billing plans, voucher management, reporting, access control, user management and Wi-Fi Hotspot advanced monitoring.

C Today wireless internet access plays a significant role in guest satisfaction and retention. Wi-Fi access increasingly becoming a must-have for business and customers demanding it. By deploying Wi-Fi Hotspot you can attract people to your location, generate additional revenue and create a private network for your own use.

ENFFIE lessens your burden and helps you save quality time by taking care of your maintenance requirements. Maintenance is carried out by adopting a three phase model of maintenance for your old /existing application systems viz. corrective maintenance, adaptive maintenance and perfective maintenance.

APPLICATION MIGRATION SERVICES

ENFFIE is an offshore application development company, specialized in providing swift and smooth application migration solutions that can move your key applications to evolve with the latest platform and operating systems. ENFFIE is armed with unique and exclusive application migration tools to automate the migration process. This automated migration process presents you cost-effective and low risk alternatives to replace or redevelop your existing applications. ENFFIE have experts who incorporate newer technologies to your older applications and vice versa.

We, at ENFFIE, provide solutions like:

CLIENT - SERVER APPLICATION DEVELOPMENT

Client-server application development at ENFFIE allows a quick and ubiquitous access to desired services. ENFFIE empowers you with the competency to input, process, store and access reliable data anytime from anywhere in the world.

ENFFIE'S Client-server application development offers you;

- ❖ Rich graphical user interface
- ❖ Quicker development
- ❖ Instant response to user input
- ❖ Accessibility
- ❖ Security
- ❖ Cross platform compatibility

DISTRIBUTED APPLICATION DEVELOPMENT

ENFFIE provides you distributed application development services that are capable of handling requests from multiple clients and are responsible for coordinating and synchronizing responses. ENFFIE helps you maintain your integrity by ensuring the usability, reusability, stability, consistency, and quality of your system.

ENTERPRISE APPLICATION INTEGRATION

ENFFIE'S enterprise application integration services can help you run your business flawlessly by integrating the fundamental and essential applications, which would facilitate real-time information sharing too. Our solution would significantly ease the business transaction among partners, suppliers, and buyers. ENFFIE has successfully developed macro-strategies that map integration efforts to the demands of the business.

.NET APPLICATION DEVELOPMENT

Software Development is again one of the framework we deal into. Over a span of time we have developed much software suitable for the business needs of our clients. We have developed many desktop applications, billing software, business analysis software, stock and sales revenue, etc. We have developed most of the software using .NET application.

.NET Application is a software framework developed by Microsoft that runs primarily on Microsoft Windows.

The .NET Framework created by Microsoft is a software development platform focused on rapid application development (RAD), platform independence and network transparency. .NET is Microsoft's strategic initiative for server and desktop development

for the next decade. According to Microsoft, .NET includes many technologies designed to facilitate rapid development of Internet and intranet applications.

.NET has brought new functionalities and tools to the application programming interface (API). These innovations allow development of applications for both Windows and the web as well as components and services (web services). .NET provides a new reflective, object-oriented API.

.NET is designed to be sufficiently generic so that many different high-level languages can be compiled.

There is a collection of development tools specifically developed for use with the .NET platform. The principal example is Visual Studio .NET, an integrated development environment from Microsoft.

ENFFIE'S EXPERTISE IN .NET

ENFFIE provides design, development and integration business solutions based on the .NET platform. Our team of experienced Microsoft certified .NET architects, analysts and developers delivers a wide range of comprehensive solutions in the following key areas.

.NET DESKTOP AND WEB APPLICATION

In order to succeed in the ever evolving and dynamically changing business environment, such features as easiness of GUI navigation, flexibility in changing business rules, data mining and data transformation services (DTS) are crucial for any desktop or web application. Other important issues that need to be considered are security, role-based access of the information, backup/archiving, fail-safe and auto recovery, trail-back and application logs. For achieving these common business goals, ENFFIE'S developers use the full range of .NET framework functionality

.NET SOFTWARE PRODUCT DEVELOPMENT

Possessing an in-depth understanding of independent software vendors and software product companies' needs, such as short development and testing lifecycles, reducing software development and support costs, enhancing product functionality for generating greater value to the customers, ENFFIE is committed to providing .NET software product development services based on specific clients' requirements and business goals. Our .NET based product development and engineering framework encompasses the full life-cycle starting with strategic planning and conceptualization, architecture and design, development, testing, deployment and enhancements up to porting and ongoing support of the end-to-end custom software product.

JAVA APPLICATION DEVELOPMENT

The primary focus of the Java division of the company is to help ENFFIE clients to better harness Java solutions at the grass root level. Building products with JAVA TECHNOLOGY DEVELOPMENT has its very own specialties and nuances. There are large sets of patterns built in this area. Mastering Java implies mastering these patterns.

As a full-service Java Solutions provider, we specialize in delivering scalable, transactional applications. We understand your business and enterprise needs and customize the java solutions accordingly. Our innovative and efficient team's dedication to provide clients with novel solutions that also challenge our developmental capabilities sets us apart from our counterparts. By understanding your business, your goals and your vision, we can work with you to make the right technology choices in **Java software solutions**. Thus, we provide the trusted advisors and experienced delivery teams needed to make it work.

Java technology development requires complete understanding of your business needs and accordingly devising java solutions that are secure, scalable and reliable. At ENFFIE , we believe in adopting a comprehensive 360° approach that focuses from scratch on each and every aspect of the java technology development process.

We capitalize on our expertise in Java consulting and take responsibility for ensuring the success of the full life-cycle development of **Java software solutions**. We utilize open source application frameworks to build applications, which are robust, reliable and guarantees optimum performance. These applications are tailor-made to suit the specifications and requirements of your business objectives. The core focus is on always ensuring implementation of Service-Oriented systems using SOA standards. The other core aspect is integrating enterprise applications with various different social media websites such as MySpace and Facebook.

The **Java consulting** team at ENFFIE Software is proficient and experienced to create and manage applications aptly and accordingly adapt with the fast changing technological advancements. They are equipped to work on existing applications and transform them to meet your future business objectives and expectations. Hence, the java consulting team specializes in complete integration of open and legacy systems. The team can easily upgrade the level of performance to match the requirements of open source Java solutions.

Quality and efficiency are the requisites for a successful development and

implementation of java software solutions. Any type of technological development remains inadequate if it lacks quality and efficiency and in turn hampers the growth of one's business. We at ENFFIE understand the criticality of delivering a product that is of par excellence and efficient in every respect. Hence, our endeavors are concentrated on building technologies that are at par with the global giants in the industry and can compete with the best available Java solutions in the market. A product's success also depends on the turnaround time and therefore it becomes imperative for us to always meet the deadline that it was agreed upon. Quality, excellence and performance are evident at each and every stage of development and implementation of **Java solution**.

➤ **ANDROID DEVELOPMENT**

- ❖ Discussion boards

Benefits of Social Media

- ❖ Increase in Sales
- ❖ Encourage word of mouth
- ❖ Understand and Engage your customers
- ❖ Increase in ROI
- ❖ Customers Feed back
- ❖ Cost Effective
- ❖ More online conversation about your brand
- ❖ Targeting right Audience
- ❖ Two way conversation

SEARCH ENGINE MARKETING

Search Engine Optimization is a process to establish your website's visibility on popular search engines and also to improve quality traffic using organic results. The main reason to apply search engine optimization techniques is to increase your web site's traffic by obtaining higher rankings in search engines for keyword searches related to your web site. The idea is that with increased traffic, you will have increased sales.

At ENFFIE, we follow certain methodologies to improve the search engine friendliness of your website. So, once you approach us, we do a pre-analysis report to let you be aware of the current state of your website.

➤ .Link Building

Link Building is one of the key aspects of SEO. The process is done to get quality back links relevant to the services offered by the website. We ensure to bring more valuable back links that are relevant to the content of the website.

We are more than just an ordinary SEO company. We are one **stop shop solutions provider** for all your internet marketing needs. We ensure the campaigns we develop achieve your sales objectives.

➤ Ecommerce SEO

SEO is not a **magical trick** to improve your search engine visibility. Rather, it is a genuine process that requires dedication and commitment to get better ROI. E- Commerce SEO is nothing more or less than the normal SEO.

We maintain SEO of various E- Commerce websites with regard to their respective products or services. E -commerce SEO is one type of high end SEO which involves end number of keywords and other back end activities.

➤ ONLINE ADPOSTING

Online advertising is a form of promotion that uses the Internet and World Wide Web to deliver marketing messages to attract targeted customers. The internet has become an ongoing emerging source that tends to expand more and more. The growth of this particular medium attracts the attention of advertisers as a more productive source to bring in consumers. Another benefit is the efficiency of the advertiser's investment. Online advertising allows for the customization of advertisements, including content and posted websites. The internet has become an ongoing emerging source that tends to expand more and more. The growth of this particular medium attracts the attention of advertisers as a more productive source to bring in consumers.

Internet marketing is inexpensive when examining the ratio of cost to the reach of the target audience. Companies can reach a wide audience for a small fraction of traditional advertising budgets. The nature of the medium allows consumers to research and to purchase products and services conveniently. Therefore, businesses have the advantage of appealing to consumers in a medium that can bring results quickly.

Ad Posting, program is one of the easiest & instant income programs. The best way is through the medium of Internet. It provides the opportunity for people from all over India to earn money on the Internet. Generating a stable online income by sitting at home is something that most of us would like to achieve.

Today people are more interested in searching jobs & income opportunity on Internet rather than referring any newspaper. Doing this they get huge database of company, instant business details, online support, online payment options & many more.

GRAPHICDESIGNING

ENFFIE specializes in providing creative Graphic Designs with original concepts, helps you to establish your brands. We provide quality graphic designs with quick turnaround time and an affordable service for startup or established businesses.

In general a unique Graphic Design is a visual representation of your messages to your prospects. It requires a variety of products and efforts to carry on design activities, such as Logo design, Stationary design, flyers and leaflets, brochures design, label design, product packaging, product catalog, booklets, magazine Ad, newspaper advertisement, billboards and custom posters thus giving your organizations a visual 'brand' image.

We understand the most important role of Graphic Designers and work at our best to produce a unique design solution to communicate our clients' messages with high visual impact and using innovation to redefine a design brief within the constraints of cost and time.

A beautiful designed graphics is the first impression to your prospects and it should remain as an un-forgettable impression, it is important that lots of emphasis is placed on crating the right Graphic Designs and layouts for the website and the products you are offering. And this is where we come in to help you in establishing your brand identity by way of creating exclusive graphics for your business.

This proves that graphics does not only relate to the images of a company. It also plays an important part in the effective marketing of a company. So we use both marketing and imaging concepts in all our designs so that we can give you maximum benefits.

We take all our designing jobs seriously to provide our clients with interactive designs that are effective in drawing profit making traffic and business to them. We have a highly qualified team of designers, illustrators and creative directors that can cater to all and any form of designing work. And whatever job we take, we work to ensure that we don't have a onetime relationship, but instead, a lasting association with our clients.

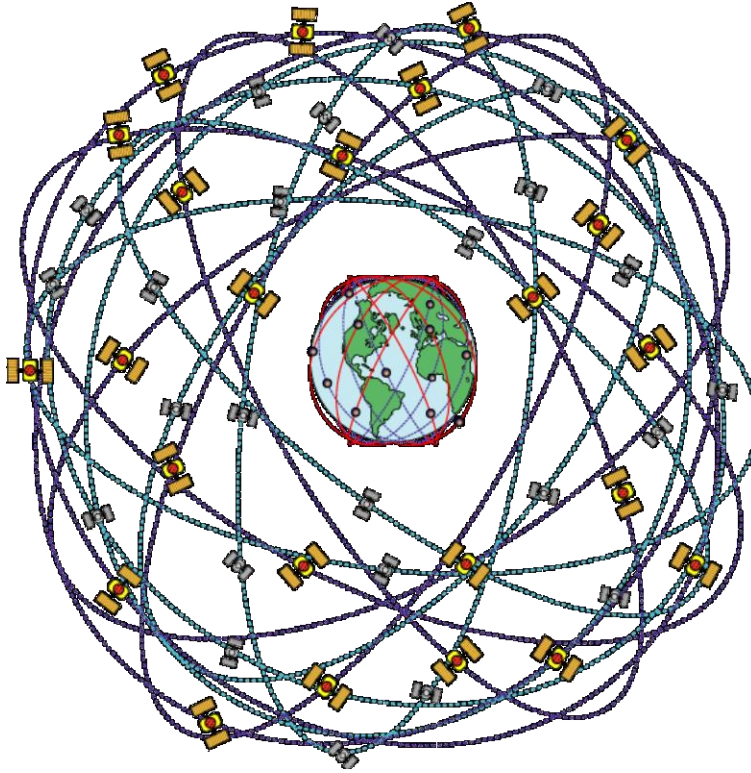

We ensure that the your logo, stationery, web design and all other marketing materials that you may need or require for your business is created in such a way that they can not only be easily transferred on your required promotional media, but also ensures that they generate as much business for you as possible.

And to make things much easier for you, we can take care of all your marketing requirements by also taking care of your printing requirements. We ensure that a job handed to us will definitely turn out to be a job well done.

❖ **GPS DEVICE**

➤ **GPS Based Tracking System**

These **GPS based tracking systems** are used for tracking the path, speed & other operational attributes of various types of vehicles. These GPS based tracking systems consist of a transmitter that is fitted into the vehicle to be tracked & a receiver that is held at the other end. These GPS based tracking systems have a large distance range & transfer & receive the data through a **Global Positioning System**, from a satellite. The device fits into the vehicle and captures the GPS location information apart from other vehicle information at regular intervals to a central server. Several types of vehicle tracking devices exist. Typically they are classified as "passive" and "active". "Passive" devices store GPS location, speed, heading and sometimes a trigger event such as key on/off, door open/closed. Once the vehicle returns to a predetermined point, the device is removed and the data downloaded to a computer for evaluation. Passive systems include auto download type that transfer data via wireless download. "Active" devices also collect the same information but usually transmit the data in near-real-time via [cellular](#) or satellite networks to a computer or data center for evaluation. The tracking server has three responsibilities: receiving data from the **GPS** tracking unit, securely storing it, and serving this information on demand to the user

A flexible and easy to use software for tracking vehicles. Will help the management to

- ❖ Monitor their mobile workforce
- ❖ Prevent misuse as over speed, idle time, self-use, etc.
- ❖ Real time monitoring of fuel, engine, speed, mileage, Ac.
- ❖ Remote control over the vehicle.

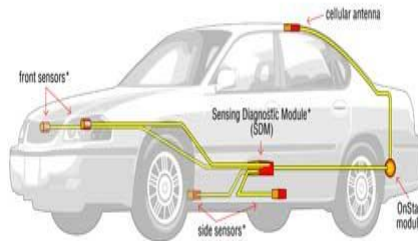

TECHNOLOGY

Satellite scanning

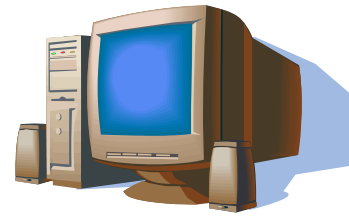

Sms/Gprs service to users

GPS Tracker Enabled vehicle

Data sent via cellular network

Monitoring @ your PC

GPS tracking systems are very effective in monitoring the driving style

FOR LOGISTICS AND PARCEL SERVICES

- ❖ Gain maximum control and real-time visibility of your fleet.
- ❖ Improved operational efficiency
- ❖ Better real-time decisions from detailed information

- ❖ Improved customer service and finally the On-time delivery
- ❖ More accurate billing
- ❖ Efficient route management

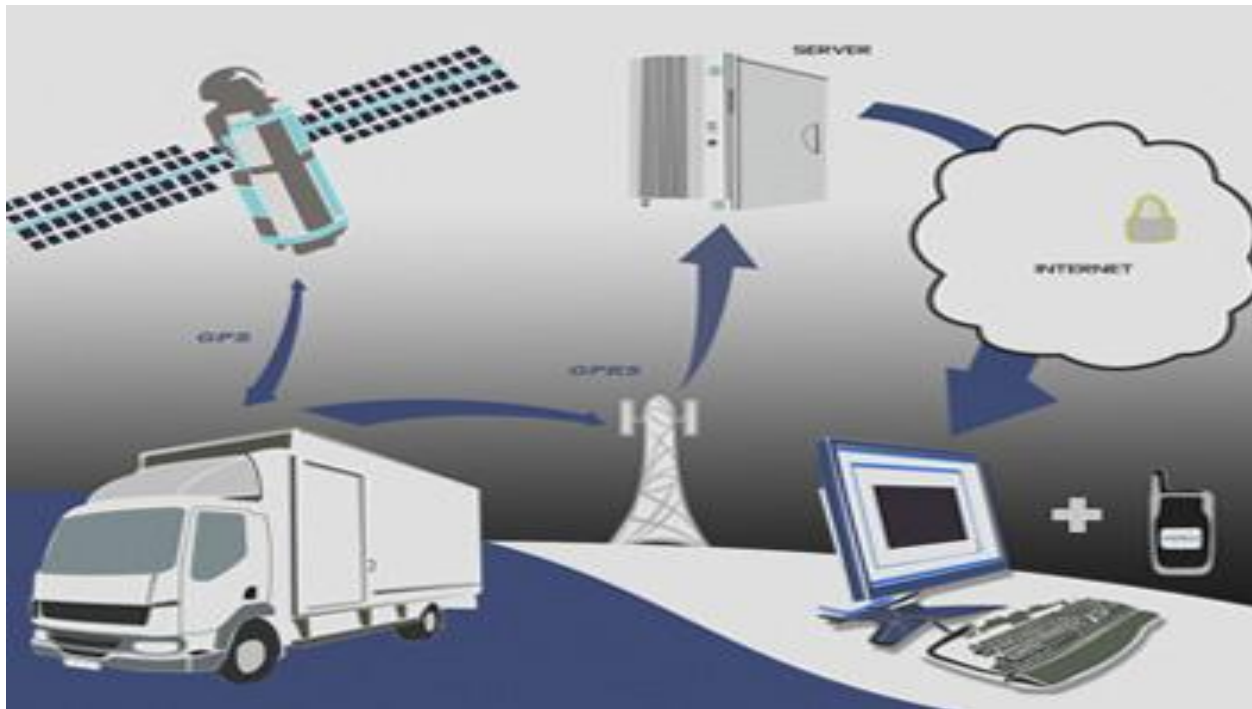

How it works For Schools?

- ❖ Track School Buses in *Real Time*
- ❖ Remotely monitor the status of
 - ❖ Windows/Doors and makes
 - ❖ the safety of students
 - Provision for ID card reader.
 - Location information for parents

Through SMS

- Prevents misuse as over speed, Idle time, etc.
- ❖ Provides parents

For Rental car's Truck Owners

- ◆ Remote control over their vehicles.
- ◆ Easy tracking of mobile work force with real-time
- ◆ Speed, fuel, mileage, etc.
- ◆ Maintains the data base for the complete trips.
- ◆ Effective planning and decision making
- ◆ Prevents misuse like idle time, self-use and hence Reduce fuel bill
- ◆ Can improve the driver performance
- ◆ Eases the job of the payroll department.

HARDWARE SOLUTIONS

In information technology, hardware is the physical aspect of computers, telecommunications, and other devices. The term arose as a way to distinguish the "box" and the electronic circuitry and components of a computer from the program you put in it to make it do things. Hardware implies permanence and invariability. Software or programming can easily be varied. You can put an entirely new program in the hardware and make it create an entirely new experience for the user. Like software, hardware is a collective term. Hardware includes not only the computer proper but also the cables, connectors, power supply units, and peripheral devices

SERVICES

From Enffie we design innovative, high quality, product for a variety of CCTV brand owners around the world.

Sparklette Dome

A new dome designed for very low cost applications, retaining the diecast construction and housing with ceiling mount option, with a simple menu structure which is very easy to use.

Hardware Features

- Continuous pan rotation
- 120 degrees/sec

- Horizon tilt view
- Automatic mechanical bottom flip
- LED data communications indicator
- 18-27 Volts ac/dc operation
- Zoom range: 18x standard, other ranges available

Simple Menu Structure

- Intuitive and easy to navigate - minimal keystrokes
- Easily customizable to customer requirements
- Password protected

Limpet Wallmount

This unique design mounts very simply to a wall, needs no slipping, and is powered by Overview's brushless direct drive motors, giving it truly startling performance. With a 2mm thick, 108mm diameter polycarbonate tilted bubble, which enables it to look above the horizon, and a 3mm diecast aluminium housing, it is vandal resistant. Installation is particularly easy and the unit is designed to be weatherproof to IP67

Features

- Vandal resistant
- Sony 10x, Vega 12x or Maia 10x camera options.
- bullet Analogue, IP or GPRS/3G connectivity

- Angled 108mm OD bubble for excellent forward view
- 0.01° positioning accuracy
- Wide dynamic speed range

INFRASTRUCTURE OF ENFFIE

AREA:

The total area of the office space is 1200 sq feet. We are centrally located and the conveyance to the office is so much easier.

CAPACITY:

Presently the seating capacity available at the office space is for 25 employees. However, as part of our remote support services

INTERNET CONNECTION:

High Speed Broadband Connection

❖ **System Configuration:**

Linux and
Windows8OS Intel
i3 processor
